PROFILE

Software engineer working on reliable and reproducible systems and workflows. Experienced with Rust, Python, and TypeScript. Designing customized agentic workflows that handle planning, implementation, adversarial review, testing, and documentation. Has worked with web apps, terminal interfaces, data analysis pipelines, all with explicit failure handling and human approval gates. Great technical writer with professional experience translating client and editorial requirements into maintainable work.

TECHNICAL SKILLS

Languages: TypeScript, Python, Rust, C; working knowledge of Java, Bash, and SQL

AI-assisted engineering: AI harnesses, agent workflow and context design, skill writing, task decomposition, independent review, human-in-the-loop validation

Web, data, and infrastructure: Next.js, React, Astro, HTTP/REST APIs, PostgreSQL, SQLite, Docker, Linux

Engineering: Git, GitHub Actions, automated testing, CI/CD, system design, technical documentation

SOFTWARE EXPERIENCE

Independent Software Developer | Freelance and open source July 2023 to Present

- Built a photography portfolio frontend for a client, using Next.js 14, React, TypeScript, and Sass.
- Completed a Python data pipeline and analysis project, ingesting YouTube comments via its API and using NLP sentiment analysis and charts for a journalist's published post.
- Implemented tree-based window management and directional navigation in **fht-compositor**; authored five merged **Starship.rs** pull requests across Ruby, Node.js, Go, Azure, and shared Context modules.

SELECTED AI AND SOFTWARE PROJECTS

Jixia | Agentic education platform | Python, Harness Engineering github.com/marcybelardo/jixia-study

- Designed and operates a repository-backed personal learning system, with durable state for lessons, exercises, assessment, feedback, scheduling, and mastery tracking across nine verified lesson modules.
- Established independent accuracy, teaching, and assessment-review gates; built a Python publisher with content allowlisting, metadata validation, sanitized HTML, transactional builds, path controls, and 119 automated tests.

chikachika | Local-first livestream overlay engine | Rust github.com/marcybelardo/chikachika

- Completed the pre-release 0.0.1 vertical slice using an agent-assisted workflow spanning requirements, issue decomposition, architecture decisions, implementation, review, and verification.
- Built eframe/egui, Axum, and Tokio components with HTTP/SSE delivery, versioned JSON persistence, lifecycle coordination, non-destructive error handling, and cross-platform automated checks.

Portfolio website and Standard.site publisher | Astro and TypeScript github.com/marcybelardo/marcybelardo.github.io

- Built an OAuth-authenticated publisher with local schema validation, deterministic records, compare-and-swap writes, bounded retries, dry-run support, and read-back verification; the portfolio includes 126 Node test blocks plus Python and production-artifact checks.

ADDITIONAL EXPERIENCE

Senior Content Editor | Top Results Consulting September 2022 to May 2023

- Led six to seven writers producing approximately 40 articles weekly; set standards, gave final approval, coached contributors, and improved primarily AI-assisted workflows using Jasper AI and ChatGPT.

EDUCATION

Diploma in Computer Science (ongoing) | University of the Philippines Open University Expected 2028

Bachelor of Arts in Film | University of the Philippines Diliman 2019
